What's New?

Version 1.4.1.0

Released: 23-10-2026

What’s New in This Version

• **Net P/L % column added in Assets overview**
The Net P/L % value is calculated based on the Net Investment and Market Value. The regular P/L % is based on Cost Base and Market Value. When the Net Investment is zero or negative, a green infinite symbol ∞ is shown.

• **Break-Even Bubbles on the Dashboard**
Besides ‘target’, ‘RSI’ and ‘MA’ a ‘Break-Even’ option is added to the Bubble Chart. This will show the distance of a coin related to it’s Break-Even level. This level is based on the Net Investment and the actual Market value.

• **Capital Flow diagram corrected**
The Capital Flow diagram did not show correct info in certain situations. That has been corrected now.
